KPMG Australia report to GTAP Board - 2021

GTAP Model and Data Base Usage and Projects

In the last year we have applied the GTAP database and models in a number of projects.

- 1) Applying the GTAP 10 database to update the GTEM-C model.
- 2) Applying the GTAP model and database for the purpose of creating models of 14 small south Pacific nations that are part of the Oceania region for the purpose of understanding the effects of climatic changes.
- 3) Disaggregating hydrogen from the chemicals sector in the GTEM-C model.

These projects are important for helping our clients in extending their modelling capabilities and in extending our own capabilities in climate and energy issues.
