

# Doha-Experiment#5

KISS = Keep it Simple

## Experiment Questions

Implementing two economically meaningful closures gives us the same story for our studies ?

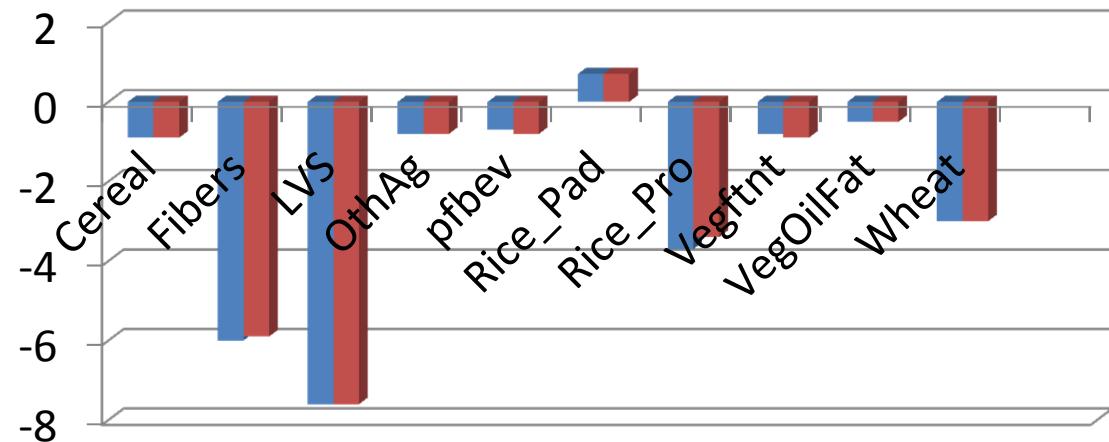

# Experiment # 4 Changing Model Closure

# % Change in Egypt's Imports due to Doha Round

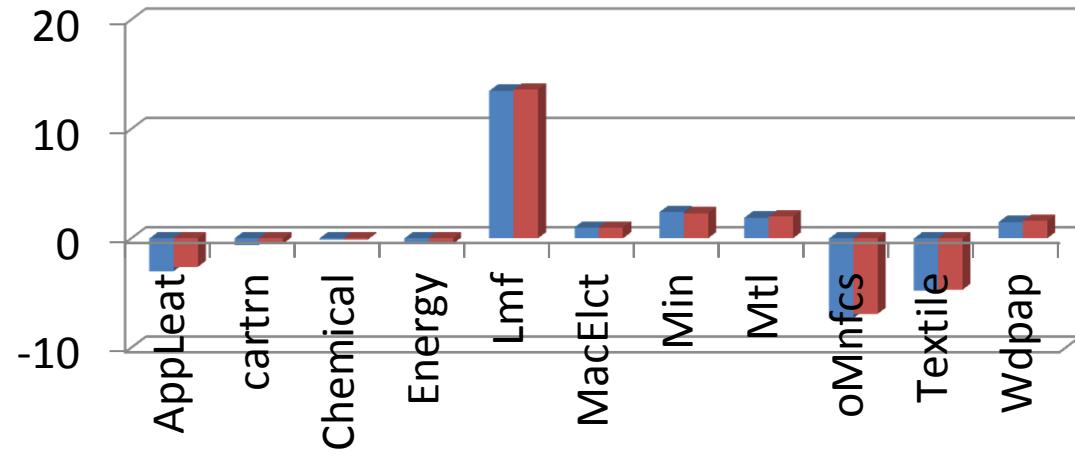

- Agri Fixed Unskilled Labor Wage in LDCS
- Agri Flexible Unskilled Labor Wage

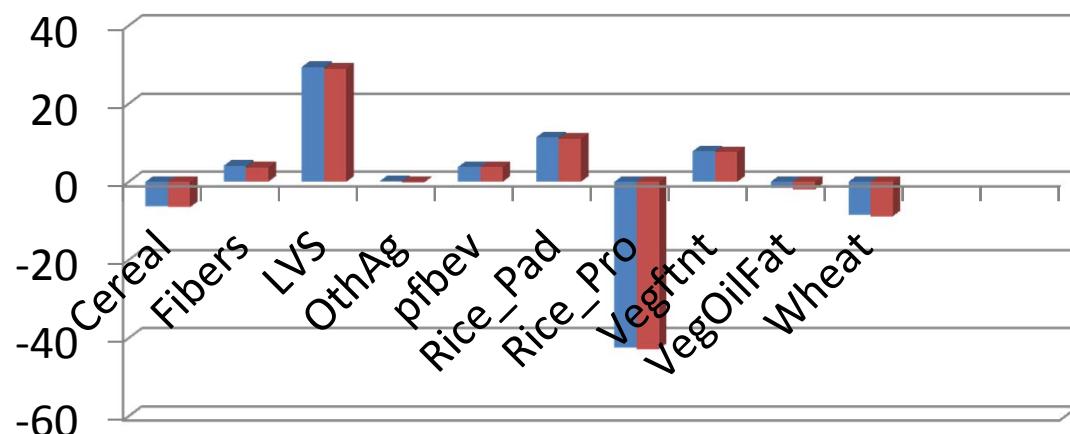

- Non Agri Fixed Unskilled Labor Wage in LDCS
- Nong Agri Flexible Unskilled Labor Wage

## % Change in Egypt's Exports due to Doha Round

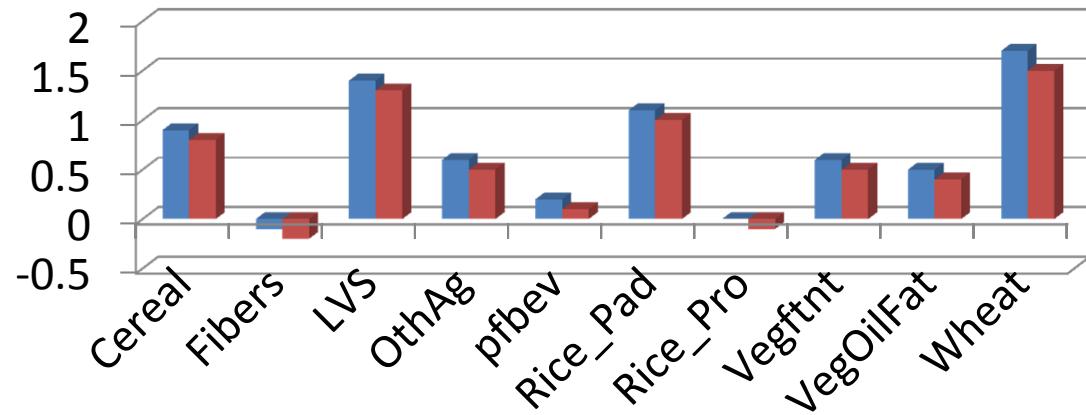

- Non Agri Fixed Unskilled Labor Wage in LDCS
- Nong Agri Flexible Unskilled Labor Wage

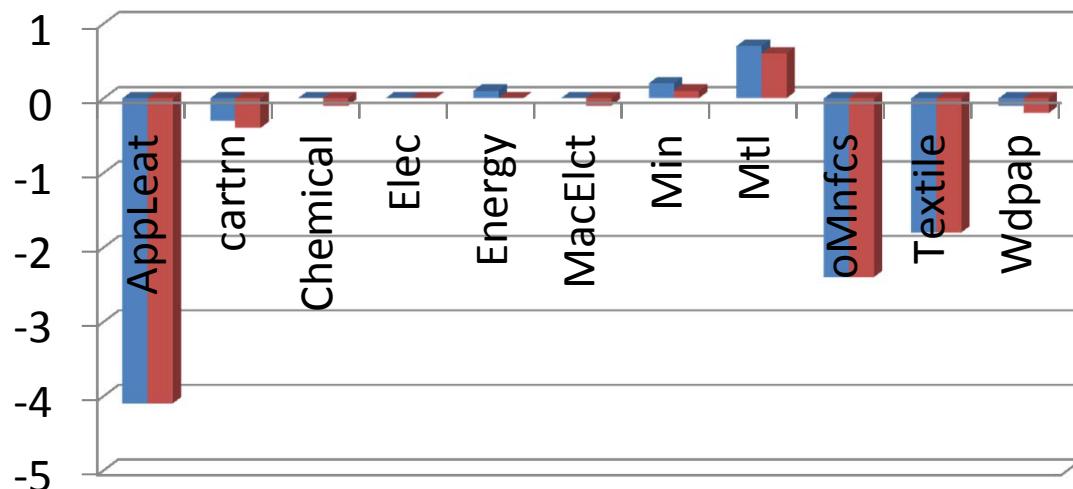

- Agri Fixed Unskilled Labor Wage in LDCS
- Agri Flexible Unskilled Labor Wage

## % Change in Egypt's Output due to Doha Round

- Agri fixed unskilled labor wage in LDCs
- Flexible Unskilled Labor Wage

- Non Agri fixed unskilled labor wage in LDCs
- Non Agri Flexible Unskilled Labor Wage

## Percentage Changes in Egypt's Domestic Production, Exports and Imports with Alternative GE Closures

	Fixed Unskilled Labor wage	Flexible Unskilled Labor wage
Domestic Production	-0.263	-2.467
Exports	13.44	11.516
Imports	-10.574	-12.679

## Static Welfare Effects Egypt with Alternative GE Closures (millions of 2001 dollars)

	Fixed Uskl	Flex	Diff
Total	11	-72	83
Allocative Efficiency	70	66	4
Endowment ("Unskld", "Egypt")	74	0	74
Term of Trade	-101	-106	5
Investment Saving	-33	-33	0

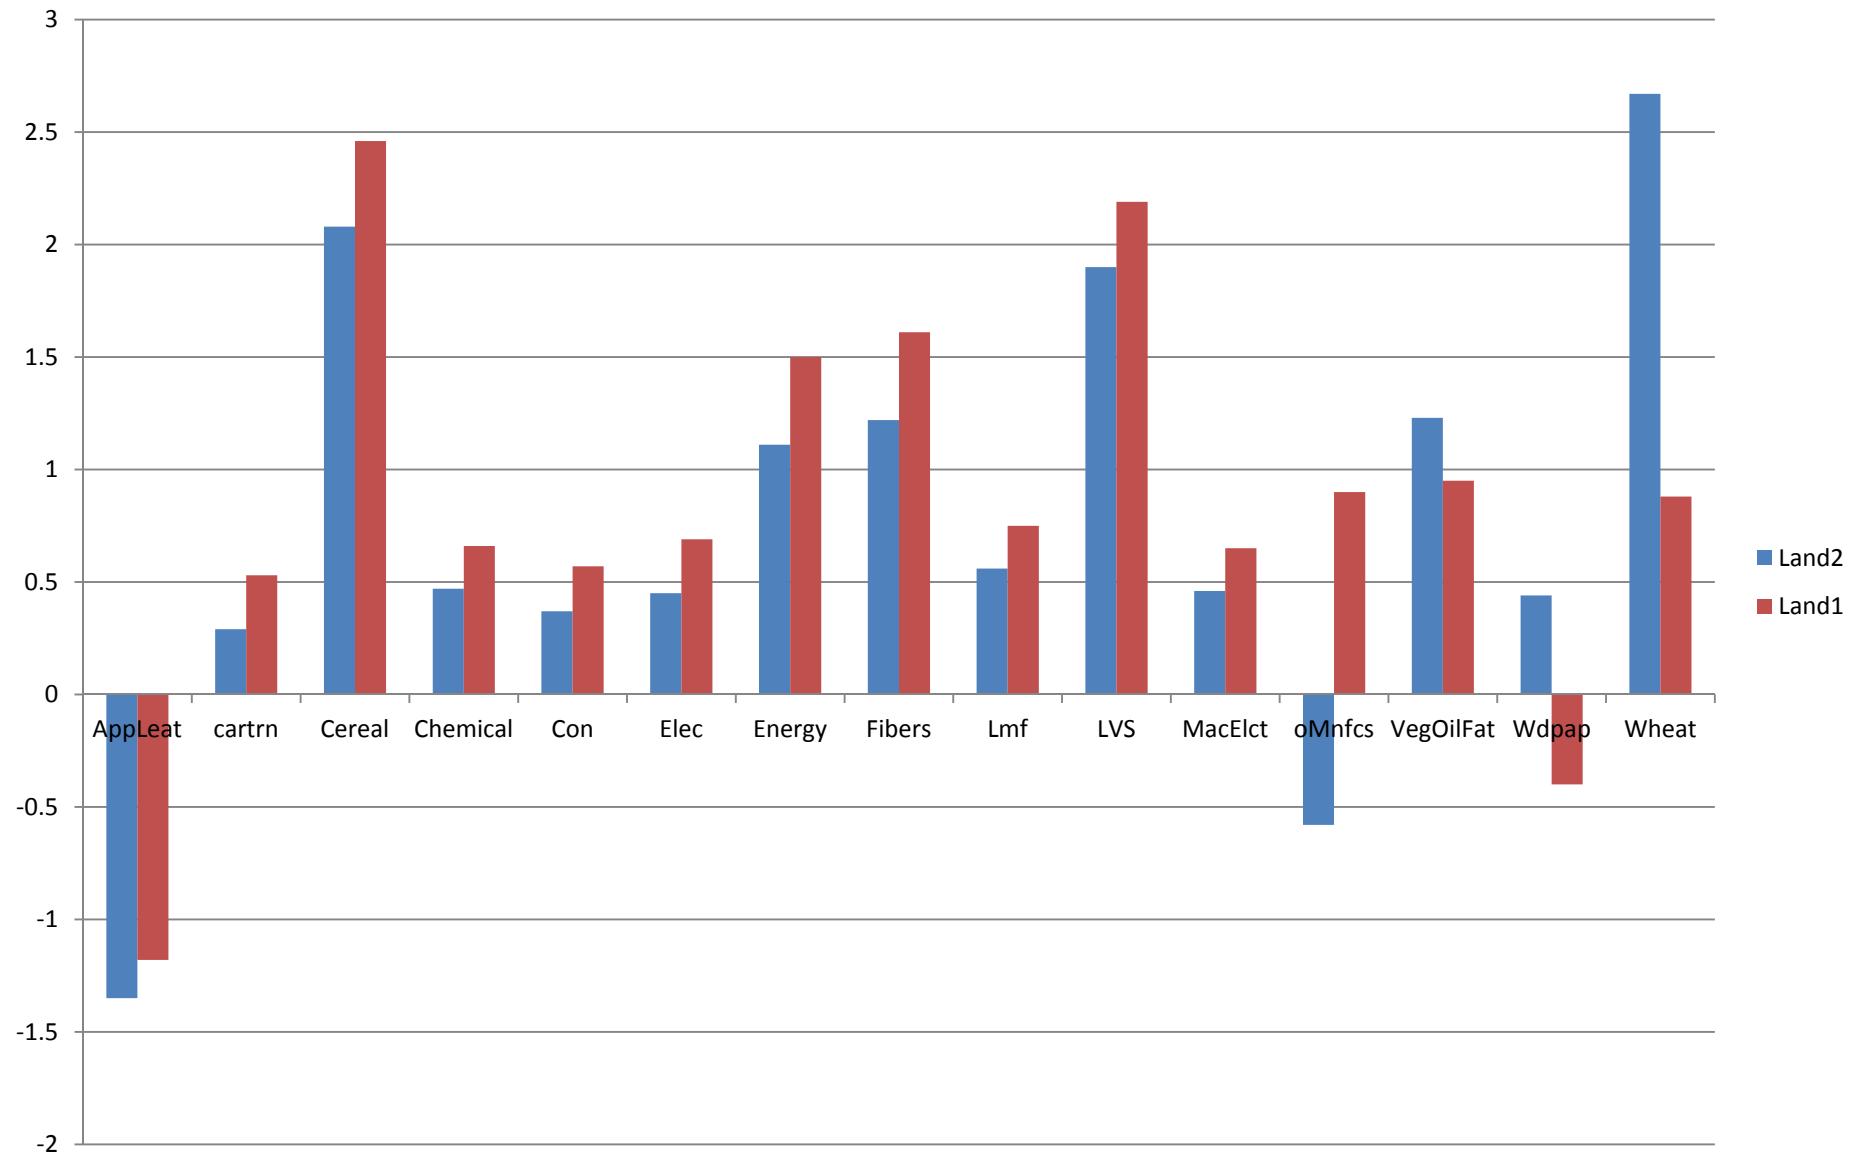

## Egypt: From fixed to flexible wage (unskilled labor)

- Our Focus: Most of the loss comes from endowment efficiency loss:
  - For almost all sectors the increase in outputs under Doha are slightly lower under flexible wage than under fixed wage
  - the drop in nominal wage (of unsk) is smaller under flexible wage (-0.4%) than under fixed wage (-0.6%) (i.e. unsk. labor is more expensive)
  - The other average input prices have dropped , hence one explanation of the decrease in endowment eff. welfare.

## Egypt: From fixed to flexible wage (unskilled labor)

- Focus: which sector of the economy benefit (or loses) from the changes?
- Livestock and wheat sectors are where most of the (intriguing) actions occur:

# Eg. %change in and prices

# Changes in primary factor demand

- Livestock and Wheat (both are highly labor intensive):
- For wheat:
  - The increase in demand for unsk labor is smaller under flexible wage (normal because nominal wage has risen) ;
  - The increase in demand for land is also smaller (as price of land in the wheat sector has risen more)
    - → hence the contraction in wheat output.
- For livestock:
  - The increase in demand for unsk labor is smaller under flexible wage (normal because nominal wage has risen) ;
  - But Lvst is using less land too (although the price of land in Lvst sector has not risen much) ? Why no substitution because the is

## Bottom line:

When unsk labor supply is limited, the lvst and wheat sectors are the most affected: they use less labor and (also generally less land because lower substitution effects). This contracts output and the returns to factor (loss in endowment effect of \$ 74 millions for the regional hh)

- Equation ENDWDEMAND
- # demands for endowment commodities (HT 34)
- (all,i,ENDW\_COMM)(all,j,PROD\_COMM)(all,r,R EG)

$qfe(i,j,r)$

$$= -afe(i,j,r) + qva(j,r)$$

$$- ESUBVA(j) * [pfe(i,j,r) - afe(i,j,r) - pva(j,r)];$$
