The Centre of Policy Studies [CoPS] has used GTAP data and GTAP-related models for a number of projects during the last year. For example, Peter Dixon and Maureen Rimmer worked intensively to construct a baseline for dynamic GTAP sims. Glyn Wittwer has been regionally disaggregating the GTAP data into, for example, NUTS3 regions for his EuroTERM and GlobeTERM models. The standard GTAP model has been used for a variety of smaller projects.
