Brief background and Scenarios

The change of China real GDP growth

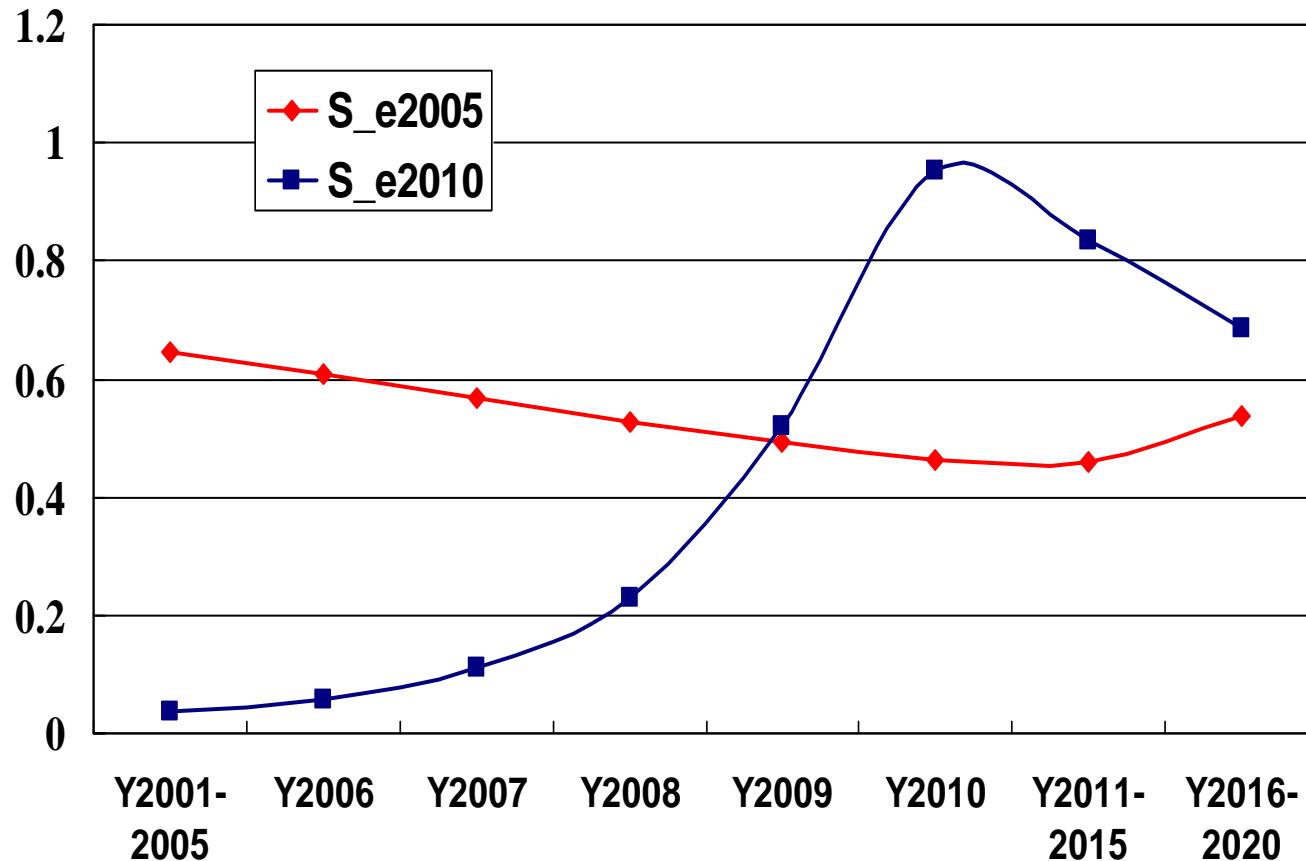

(Cumu. Difference to baseline,%)

Finding: It does matter to China's real GDP growth, especially for the beginning of several year. However, such a disparity will be eliminated gradually and the cumulative growth to baseline will converge around 2020.

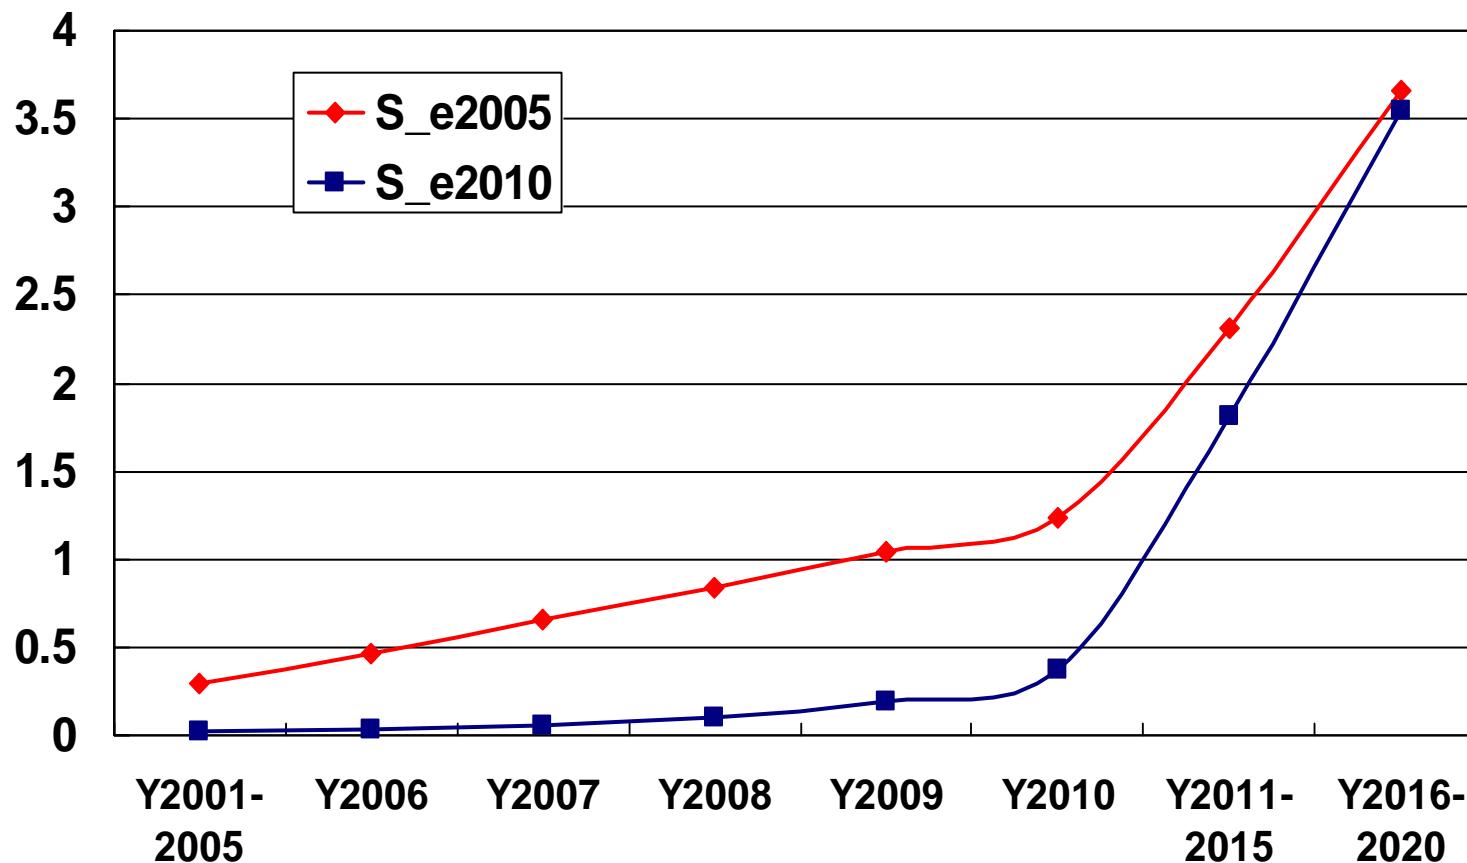

RORGA – Actual Return on Capital

(Cumu. Difference to baseline, %)

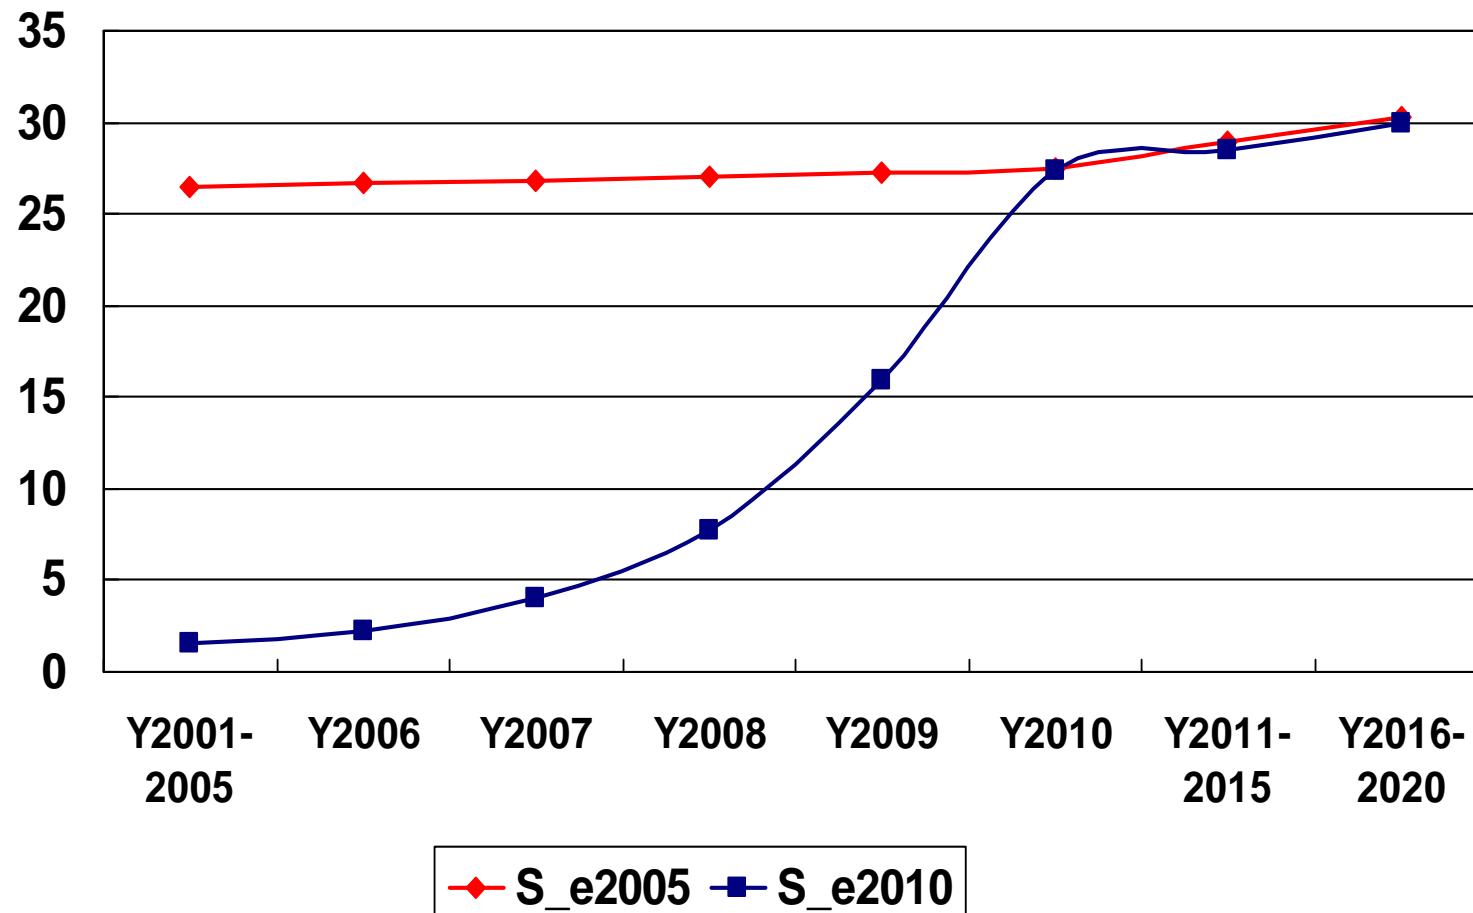

Change in Capital

(Cumu. Difference to baseline, %)

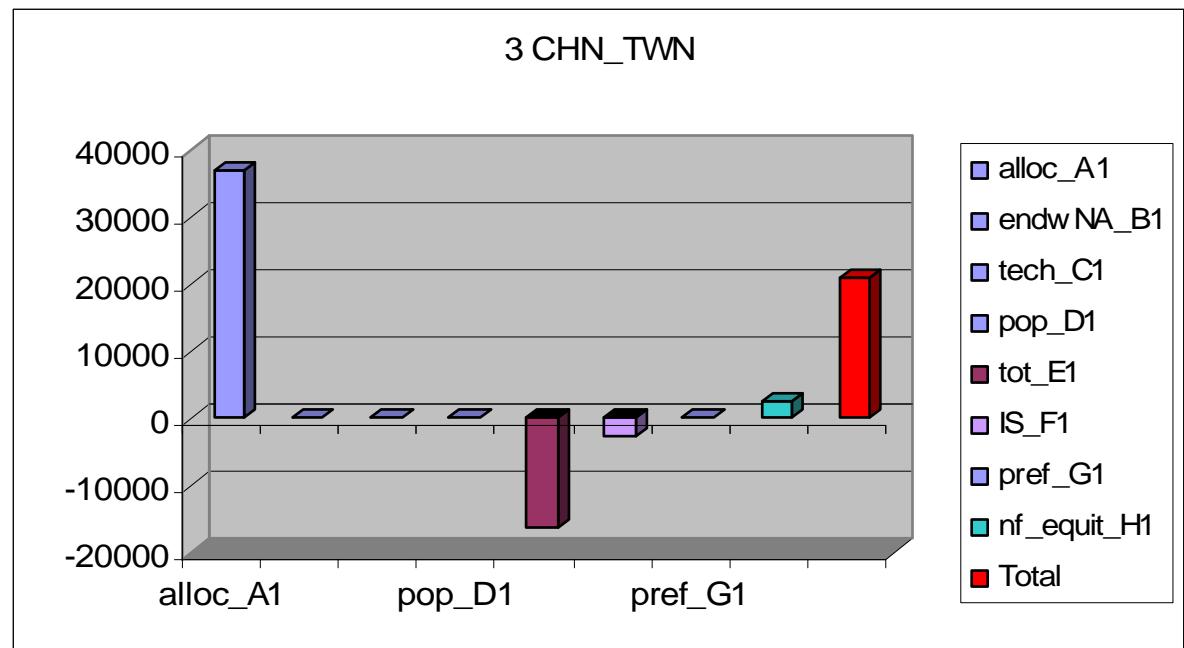

Change in Employment

(Cumu. Difference to baseline,%)

Welfare Decomposition

- The terms of trade effect on regional EV

$$\begin{aligned} \text{CNTtotr}(r) = & [0.01 * \text{EVSCALFACT}(r)] \\ & * [\sum(i, \text{TRAD_COMM}, \sum(s, \text{REG}, \text{VXWD}(i, r, s) * [\text{pfob}(i, r, s)])) \\ & + \sum(m, \text{MARG_COMM}, \text{VST}(m, r) * [\text{pm}(m, r)])] \\ & - \sum(i, \text{TRAD_COMM}, \sum(s, \text{REG}, \text{VXWD}(i, s, r) * [\text{pfob}(i, s, r)])) \\ & - \sum(m, \text{MARG_COMM}, \text{VTMD}(m, r) * [\text{pt}(m)])]; \end{aligned}$$

Since $\text{tot}(r) = \text{psw}(r) - \text{pdw}(r) \Rightarrow \text{psw}(r) < \text{pdw}(r)$

- Capital goods price effect on regional EV

$$\text{CNTcgdsr}(r) = [0.01 * \text{EVSCALFACT}(r)] * [\text{NETINV}(r) * [\text{pcgds}(r)] - \text{SAVE}(r) * [\text{psave}(r)]];$$

$\text{pcgds}(r)$ and $\text{psave}(r)$ increase, but the change in the second term is larger.

- The contribution to regional EV of changes in financial equity owned by regions

$$\begin{aligned} \text{CNTfeqyr}(r) = & [0.01 * \text{EVSCALFACT}(r)] * [\sum(i, \text{ENDWC_COMM}, \text{VOA}(i, r) * [\text{qk}(r) - \text{pop}(r)]) \\ & - \text{VDEP}(r) * [\text{qk}(r) - \text{pop}(r)] + \text{YQHTRUST}(r) * [\text{yqht}(r) - \text{pop}(r)] - \text{YQTFIRM}(r) * [\text{yqtf}(r) - \text{pop}(r)]]; \end{aligned}$$

*Household income from equity in the global trust, $\text{yqht}(r)$, decreases
Global trust income from equity in firms in region r , $\text{yqtf}(r)$, increases*

Brief conclusions and policy implications

- For China
 - Be patient...
 - Although the benefits of gradual elimination are not so significant in short term, the long run effects are similar...
 - The adjustment is smoother...
- For NAMERICA and EU
 - Taking time to adjust...
 - Although the competition from China is temporary weakened, it will be released gradually. The best strategy is getting ready for adjustments...

- **Thanks for attention!**
- **Looking for all the participants to China...**
