

E3-Modelling is a knowledge-based company located in Athens, Greece, providing consulting and research services on energy and climate policy topics using state of the art modelling tools. The company has delivered numerous studies for European Governments, professional associations, and large-scale companies in the energy field. Our expertise focuses on the design of transition in the energy market and systems, both in the demand and supply of energy, towards green and climate-friendly structures and technologies.

We are seeking exceptional professionals to join our energy system modelling team so as to support model development activities and engage in the use of models to simulate energy policies and strategies. The candidates should have the following capabilities:

- Degree in Engineering, Mathematics, Economics or other quantitative field.
- Excellent oral and writing communication skills
- Familiar with current EU energy and climate policies
- Advanced analytical and quantitative skills.
- Good knowledge of one programming language (preferably GAMS).

Interested candidates can provide their CVs by sending an e-mail at info@e3modelling.gr
