

Taiwan

Hsing-Chun Lin and Shih-Hsun Hsu

1. Initial Input-Output Table

The source of the initial input-output (I-O) table for Taiwan is “Input-Output Table of Taiwan-2006” from the Directorate-General of Budget, Accounting and Statistics (DGBAS), Executive Yuan, Republic of China, Statistics Bureau Press. The original 2006 table includes 554 by 166 sectors. Valued in millions of Yuan (NT) at current producer’ prices. Two different kinds of table are available: a transactions table of domestic goods and services and a transactions table of imported goods and services.

The matrix of final demand in the transactions table of domestic products and that of the transactions table of imports include private consumption expenditure, government consumption expenditure, gross private fixed capital formation, change in stocks, exports.

The matrix of value added in the transactions table at producer’ prices includes compensation of employees, operating surplus, depreciation of fixed capital, indirect taxes and (less) subsidies. Depreciation of fixed capital was added to operating surplus to obtain a vector of employment of capital.

2. Sectoral Classification

The list of commodities in the 2006 Taiwan I-O table and the concordance to the SMAP classification is given in the Appendix table 1.

3. Sectoral Split

There are ten sectors in the original 2006 Taiwan I-O table that had to be consistent with the agriculture and manufacturing sector classifications in SMAP. These are other common crops (sector 002), Other special crops (sector 003), Other livestock (sector 008), agricultural services (sector 009), Crude petroleum and natural gas extraction (sector 012), Other non-metallic minerals (sector 015), Slaughtering and by-products (sector 016), Canned foods (sector 022), Frozen foods (sector 023), Other foods (sector 027).

4. Other Adjustments

The initial Taiwan I-O tables also contain some negative values. Although they are mainly due to the original statistics, they are not allowed for CGE analysis. We fixed some items. There two sectors in the original 2006 Taiwan I-O table that employment of capital contain negative values. These are the Sugar (sector 024) and Wearing apparel (sector 028) in GTAP SMAP sector. We estimated the three

employment of capital rate are 0.04 and 0.03.
